To authorize the Administrator of the Environmental Protection Agency to establish a program of awarding grants to owners or operators of water systems to increase resiliency or adaptability of the systems to any ongoing or forecasted changes to the hydrologic conditions of a region of the United States.

IN THE HOUSE OF REPRESENTATIVES

Mr. CARBAJAL introduced the following bill; which was referred to the Committee on ________________

A BILL

To authorize the Administrator of the Environmental Protection Agency to establish a program of awarding grants to owners or operators of water systems to increase resiliency or adaptability of the systems to any ongoing or forecasted changes to the hydrologic conditions of a region of the United States.

1 Be it enacted by the Senate and House of Representa-
2 tives of the United States of America in Congress assembled,
SECTION 1. SHORT TITLE.

This Act may be cited as the “Water Infrastructure Resiliency and Sustainability Act of 2018”.

SEC. 2. WATER INFRASTRUCTURE RESILIENCY AND SUSTAINABILITY.

(a) DEFINITIONS.—In this section:

(1) ADMINISTRATOR.—The term “Administrator” means the Administrator of the Environmental Protection Agency.

(2) HYDROLOGIC CONDITIONS.—The term “hydrologic conditions” means the quality, quantity, or reliability of the water resources of a region of the United States.

(3) OWNER OR OPERATOR OF A WATER SYSTEM.—

(A) IN GENERAL.—The term “owner or operator of a water system” means an entity (including a regional, State, interstate, Tribal, local, municipal, intermunicipal, or private entity) that owns or operates a water system.

(B) INCLUSION.—The term “owner or operator of a water system” includes—

(i) a non-Federal entity that has operational responsibilities for a federally, tribally, or State-owned water system; and
(ii) an entity established by an agreement between—

(I) an entity that owns or operates a water system; and

(II) at least one other entity.

(4) WATER SYSTEM.—The term “water system” means—

(A) a community water system (as defined in section 1401 of the Safe Drinking Water Act (42 U.S.C. 300f));

(B) a treatment works (as defined in section 212 of the Federal Water Pollution Control Act (33 U.S.C. 1292)), including a municipal separate storm sewer system (as such term is used in the Federal Water Pollution Control Act (33 U.S.C. 1251 et seq.));

(C) a decentralized wastewater treatment system for domestic sewage;

(D) a groundwater storage and replenishment system;

(E) a system for conservation of water or for transport and delivery of water for irrigation; or

(F) a natural or engineered system that manages floodwaters.
(b) PROGRAM.—The Administrator shall establish and implement a program, to be known as the Water Infrastructure Resiliency and Sustainability Program, under which the Administrator awards grants in each of fiscal years 2018 through 2022 to owners or operators of water systems for the purpose of increasing the resiliency or adaptability of the systems to any ongoing or forecasted changes (based on the best available research and data) to the hydrologic conditions of a region of the United States.

(c) USE OF FUNDS.—As a condition on receipt of a grant under this section, an owner or operator of a water system shall agree to use the grant funds exclusively to assist in the planning, design, construction, implementation, operation, or maintenance of a program or project that meets the purpose described in subsection (b) by—

1. conserving water or enhancing water use efficiency, including through the use of water metering and electronic sensing and control systems to measure the effectiveness of a water efficiency program;

2. modifying or relocating existing water system infrastructure made or projected to be significantly impaired by changing hydrologic conditions;

3. preserving or improving water quality, including through measures to manage, reduce, treat,
or reuse municipal stormwater, wastewater, or drinking water;

(4) investigating, designing, or constructing groundwater remediation, recycled water, or desalination facilities or systems to serve existing communities;

(5) enhancing water management by increasing watershed preservation and protection, including through the use of natural or engineered green infrastructure in the management, conveyance, or treatment of water, wastewater, or stormwater;

(6) enhancing energy efficiency or the use and generation of renewable energy in the management, conveyance, or treatment of water, wastewater, or stormwater;

(7) supporting the adoption and use of advanced water treatment, water supply management (such as reservoir reoperation and water banking), or water demand management technologies, projects, or processes (such as water reuse and recycling, adaptive conservation pricing, and groundwater banking) that maintain or increase water supply or improve water quality;

(8) modifying or replacing existing systems or constructing new systems for existing communities
or land currently in agricultural production to improve water supply, reliability, storage, or conveyance;

(9) supporting practices and projects, such as improved irrigation systems, water banking and other forms of water transactions, groundwater recharge, stormwater capture, groundwater conjunctive use, and reuse or recycling of drainage water, to improve water quality or promote more efficient water use on land currently in agricultural production;

(10) reducing flood damage, risk, and vulnerability by—

(A) restoring floodplains, wetlands, and uplands integral to flood management, protection, prevention, and response;

(B) modifying levees, floodwalls, and other structures to reduce risks associated with rising sea levels or to facilitate reconnection of rivers to floodplains, reduce flood stage height, and reduce damage to properties and populations;

(C) providing for acquisition and easement of flood-prone lands and properties in order to reduce damage to property and risk to populations; or
(D) promoting land use planning that pre-
vents future floodplain development;

(11) carrying out studies or assessments to
project how changing hydrologic conditions may im-
pact the future operations and sustainability of
water systems; or

(12) developing and implementing measures to
increase the resilience of water systems and regional
and hydrological basins to rapid hydrologic change
or a natural disaster.

(d) APPLICATION.—To seek a grant under this sec-
tion, the owner or operator of a water system shall submit
to the Administrator an application that—

(1) includes a proposal of the program or
project to be planned, designed, constructed, imple-
mented, operated, or maintained by the water sys-
tem;

(2) cites the best available research or data that
demonstrate—

(A) the risk to the water resources or in-
frastructure of the water system as a result of
ongoing or forecasted changes to the
hydrological system of a region, including rising
sea levels and changes in precipitation patterns;
and
(B) how the proposed program or project
would perform under the anticipated hydrologic
conditions; and

(3) explains how the proposed program or
project is expected—

(A) to enhance the resiliency of the water
system to the anticipated hydrologic conditions;
or

(B) to increase efficiency in the use of en-
ergy or water of the water system.

(e) Public Sponsorship of Private Entities.—

(1) In general.—If an applicant for a grant
under this section is not a State or local govern-
ment, an agency or instrumentality of a State or
local government, or a Tribal government or consor-
tium of Tribal governments, the program or project
to be planned, designed, constructed, implemented,
operated, or maintained through the grant shall be
publicly sponsored.

(2) Public sponsorship.—For purposes of
this subsection, a program or project shall be consid-
ered to be publicly sponsored if the grantee dem-
onstrates, to the satisfaction of the Administrator,
that—
(A) the grantee has consulted with the affected State, local, or tribal government in which the program or project is located, or that is otherwise affected by the program or project; and

(B) such government supports the program or project.

(f) PRIORITY; DIVERSITY OF PROJECT TYPES.—In selecting grantees under this section, the Administrator shall—

(1) give priority to owners or operators of water systems—

(A) that are, based on the best available research and data, at the greatest and most immediate risk of facing significant negative impacts due to changing hydrologic conditions; and

(B) whose proposed projects would most effectively deliver long-term solutions to those risks; and

(2) ensure that grants are awarded each fiscal year for a diverse range of programs and projects described in paragraphs (1) through (12) of subsection (c).

(g) COST-SHARING.—
(1) **FEDERAL SHARE.**—The share of the cost of any program or project that is the subject of a grant awarded by the Administrator to the owner or operator of a water system under subsection (b) paid through funds distributed under this section shall not exceed 75 percent of the cost of the program or project.

(2) **CALCULATION OF NON-FEDERAL SHARE.**—In calculating the non-Federal share of the cost of a program or project proposed by a water system in an application submitted under subsection (d), the Administrator shall—

(A) include the value of any in-kind services that are integral to the completion of the program or project, including reasonable administrative and overhead costs; and

(B) not include any other amount that the water system involved receives from the Federal Government.

(h) **REPORT TO CONGRESS.**—Not later than 3 years after the date of the enactment of this Act, and every 3 years thereafter, the Administrator shall submit to the Congress a report on progress in implementing this section, including information on project applications received and funded annually.
(i) Authorization of Appropriations.—To carry out this section, there is authorized to be appropriated $50,000,000 for each of fiscal years 2018 through 2022.
